

FinSight AI - Product Requirements Document

Product Vision:

Help budget-conscious professionals identify unusual spending patterns before they become problems through AI-powered transaction analysis.

User Persona:

- **Name:** Snehal , Data Analyst
- **Pain Point:** Checks bank account once a month, often surprised by how much she spent
- **Current Behavior:** Manually reviews transactions in csv, misses fraudulent charges
- **Goal:** Catch unusual spending automatically without manual effort
- **Name:** Janaki Bora , Homemaker
- **Pain Point:** Checks bank account once a month, not very technology savvy
- **Current Behavior:** Manually reviews transactions in csv, with her daughter
- **Goal:** Catch unusual spending automatically without manual effort
- **Name:** Allysa , Paralegal
- **Pain Point:** Checks spending bimonthly
- **Current Behavior:** Manually reviews transactions
- **Goal:** To flag highest category of spending.
-

Job-to-be-Done (JTBD):

"When I review my finances, I want to instantly see which transactions are unusual, so I can investigate them before they become budget problems."

Success Metrics:

1. **Anomaly Detection Precision $\geq 85\%$** - At least 85% of flagged transactions should be genuinely unusual
2. **False Positive Rate $< 15\%$** -Less than 15% of flagged transactions should be normal spending
3. **User Engagement:** Weekly return rate $\geq 40\%$ — Users come back to check spending
4. **Time to Insight:** Users understand anomalies within 30 seconds of upload

Core Features (MVP):

1. CSV upload for transaction data
2. Z-score based anomaly detection (threshold: 1.5 standard deviations)
3. AI-powered natural language explanations via chat
4. Category-based spending analysis

Out of Scope (v1):

- Bank API integration (manual CSV only)
- Multi-user accounts

- Historical trend analysis
- Budget recommendations

Technical Requirements:

- Python backend with Pandas for data processing
- Groq/Llama 3.3 for conversational AI
- Streamlit for UI
- Deployed on Streamlit Cloud (free tier)
- Response time < 3 seconds for AI queries

Validation Plan:

- Run 5 usability tests with different spending scenarios
- Measure false positive rate on test datasets
- Iterate on Z-score threshold based on results
